

CANDY DIALOGUE ENGINE

End Of Line Prompt

1.0.0

Candy DE can automatically append a custom string at the end of each Spoken Line.

This is useful, for example, to display a symbol that prompts the player to continue to the next line.

A custom string can be set for each dialogue mode, in Candy_Engine.gd, by assigning it to the following variables:

- **box_end_of_line_string**
- **bubbles_end_of_line_string**
- **subtitles_end_of_line_string**
- **chat_end_of_line_string**

The strings support BBCode, so various effects, formatting and displaying images is possible.

By default, **box_end_of_line_string** is assigned a string that will display a blinking downward arrow. This is just a helpful suggestion and you are free to change it to anything you want.

Note that you should add a space at the beginning of the string if you don't want it to touch the spoken text.

If you don't want to display a custom string at the end of each line, set the values to "" (empty string).
