

CANDY DIALOGUE ENGINE

Image Players Customization

1.0.0

Image players are used for displaying static or animated images on-screen, through dialogues.

Nodes

Root

The root node can have any desired name. A folder of the same name must be created in Candy_DE/Media/General/Images and any files the player is expected to play should be placed there.

Required Nodes

The following node is required:

TextureRect or TextureButton

- Displays the image file.
- Script pointer: @onready var **image_player**

Script

Base

The script **Image_Player.gd** should be attached to the scene's root node.

Variables

default_image_extension

The default extension to use for static image files, if none is provided with the file reference.

default_z

The default z_index value for the image player. Must be higher than the values of the dialogue box, subtitles, speech bubbles and any other such UI elements for displaying dialogues.

Other variables in the script are used internally and must not be modified.

Functions

The various functions are designed to work with the various Candy DE \$Image commands. They should not be modified.
