

CANDY DIALOGUE ENGINE

Video Players Customization

1.0.0

Video players are used for displaying videos on-screen, through dialogues.

Nodes

Root

The root node can have any desired name. A folder of the same name must be created in Candy_DE/Media/General/Videos and any files the player is expected to play should be placed there.

Required Nodes

The following node is required:

VideoStreamPlayer

- Displays the video file.
- Script pointer: @onready var **video_player**

Script

Base

The script **Video_Player.gd** should be attached to the scene's root node.

Variables

default_video_extension

The default extension to use for video files, if none is provided with the file reference.

default_z

The default z_index value for the video player. Must be higher than the values of the dialogue box, subtitles, speech bubbles and any other such UI elements for displaying dialogues.

Other variables in the script are used internally and must not be modified.

Functions

The various functions are designed to work with the various Candy DE \$Video commands. They should not be modified.

Signals

The VideoStreamPlayer's **finished()** signal must be connected to the **_on_finished()** function inside the VideoStreamPlayer's script.
