

CANDY DIALOGUE ENGINE

Typewriter Effect

1.1.0

Typewriter Effect

Candy DE can display spoken text progressively, as if it's being typed live on screen. This is called the Typewriter Effect.

Variables

The Typewriter Effect can be enabled and configured through several exported variables in **Candy_Engine.gd**:

writing_speed: the writing speed, in characters per second. Set to 0 to disable and display text instantly.

continue_fast speed: the speed when the 'Dialogue_Fast_Speed' key is held down.

continue_slow speed: the speed when the 'Dialogue_Slow_Speed' key is held down.

sync_write_speed_voice: if enabled, the writing speed will be adjusted so the text finished writing at the same time that the voice file finishes playing.

Input Actions

By default, the following input actions can modify the typewriter effect:

Dialogue_Fast_Speed: speed up the typewriter effect.

Dialogue_Slow_Speed: slow down the typewriter effect.

Dialogue_Slow: Skip the typewriter effect (immediately display the full text).

The input actions are assigned to the following exported variables:

- **Input_Speed_Dialogue**
- **Input_Slow_Dialogue**
- **Input_Skip_Dialogue**

You can create your own input actions in your project's Input Map and assign them to either of the variables above (e.g. if you need different engine instances to use different inputs).

Auto-Advance

The Auto-Advance feature makes the dialogue engine automatically advance to the next line after some time, once a Spoken Line has finished displaying. If the Typewriter effect is enabled, the time will begin counting once the text is fully written on screen.

Auto-Advance can be configured through the following exported variables:

auto_advance: the time to wait, in seconds, before auto-advancing. Set to -1 to disable auto-advance.

await_voice_playback: if enabled, auto-advance will start counting once the text is fully displayed, but will also wait for voice playback to finish before advancing. This option also prevents manually advancing before voice playback is finished.
