

CANDY DIALOGUE ENGINE

Moving Variables

1.1.0

Variables in the **Candy_Properties.gd** script can be moved to **Candy_Engine.gd** if you want each engine instance to have its own values, rather than sharing general values. Likewise, variables under the "Settings" region in **Candy_Engine.gd** can be moved to **Candy_Properties.gd**.

Simply copy/paste the variables from one script to the other, then use your code editor's find/replace tool to locate the moved variable and change its prefix accordingly. For example, when moving a variable from **Candy_Properties.gd** to **Candy_Engine.gd**, replace 'candy_de' with 'self' everywhere in **Candy_Engine.gd**.

If other scripts use the variable, they'll continue using the value from **Candy_Properties.gd**.
