

CANDY DIALOGUE CREATOR

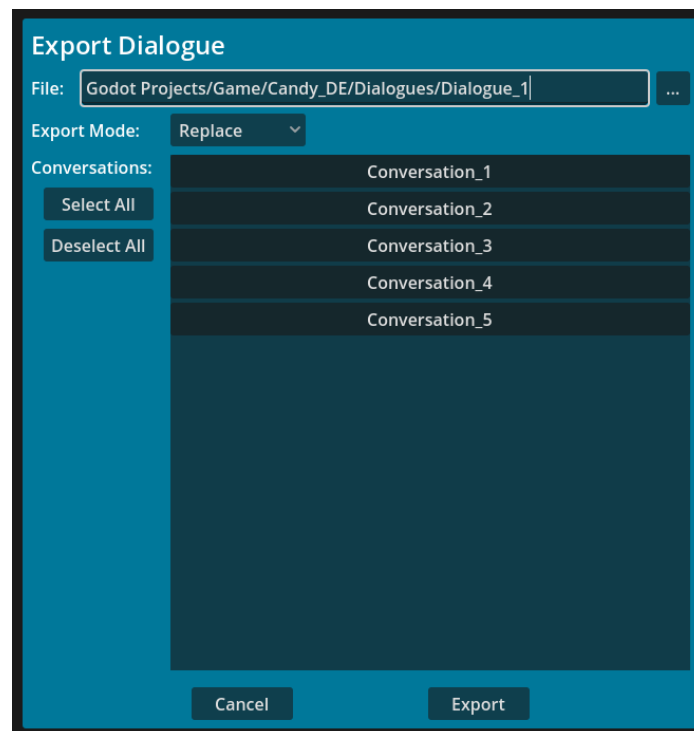

Dialogue Export/Import

1.0.0

The Export and Import Menus can be access from the Main Menu.

Export

The Export Menu displays a list of the Conversations in the opened dialogue. Click Conversations in the list to toggle whether or not they should be exported.

Three Export Modes can be chosen from if you are exporting to an existing file. If you are exporting to a new file, the export mode doesn't matter: all selected Conversations will be exported.

Replace → Replaces the entire file with the selected Conversations.

Update → Adds missing Conversations to the file, and updates existing Conversations with fresh data from the selected Conversations. Does not delete other Conversations already in the file.

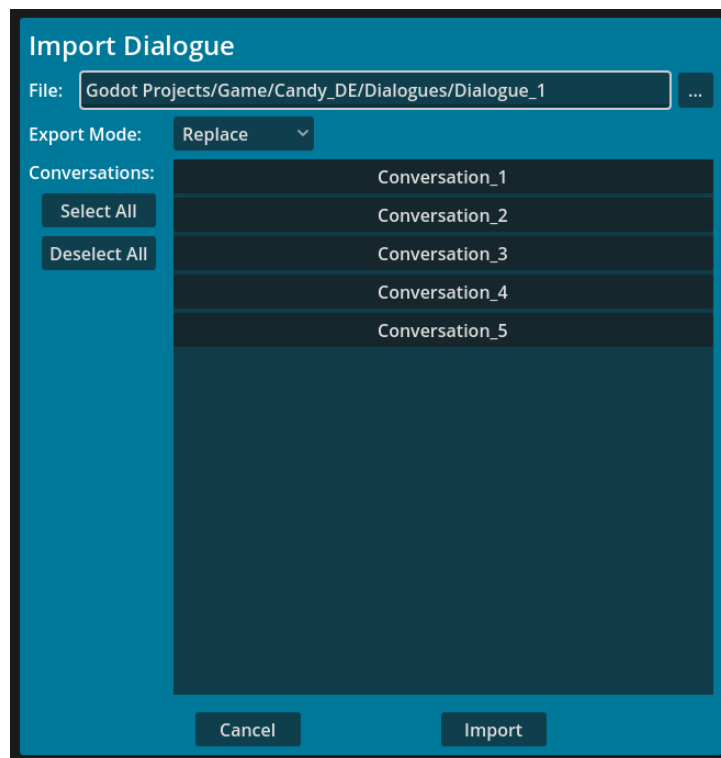

Add → Adds missing Conversations to the file, but does not update or delete other Conversations already in the file.

For example:

Editor:	Export File:	Replace:	Update:	Add:
	Conversation A.1		Conversation A.1	Conversation A.1
Conversation B.2	Conversation B.1	Conversation B.2	Conversation B.2	Conversation B.1
Conversation C.2	Conversation C.1	Conversation C.2	Conversation C.2	Conversation C.1
Conversation D.2		Conversation D.2	Conversation D.2	Conversation D.2

Import

The Import Menu is very similar to the Export Menu, and also features a list of Conversations and an option to select an Import Mode.

The Conversation list, however, represents the Conversations in the file you are importing from. You can toggle which ones to import by clicking them.

The Import Modes are similar to Export Mode as well, except that this time, Conversations in the opened dialogue will be added/updated/deleted from the import file:

Replace → Replaces the all Conversations loaded in the editor with the selected Conversations from the import file.

Update → Adds missing Conversations from the file, and updates existing Conversations with fresh data from the selected Conversations. Does not delete other Conversations loaded in the editor.

Add → Adds missing Conversations from the file, but does not update or delete other Conversations already in the file.

For example:

Export File:	Editor:	Replace:	Update:	Add:
Conversation A.1		Conversation A.1	Conversation A.1	Conversation A.1
Conversation B.1	Conversation B.2	Conversation B.1	Conversation B.1	Conversation B.2
Conversation C.1	Conversation C.2	Conversation C.1	Conversation C.1	Conversation C.2
	Conversation D.2		Conversation D.2	Conversation D.2
