

CANDY DIALOGUE CREATOR

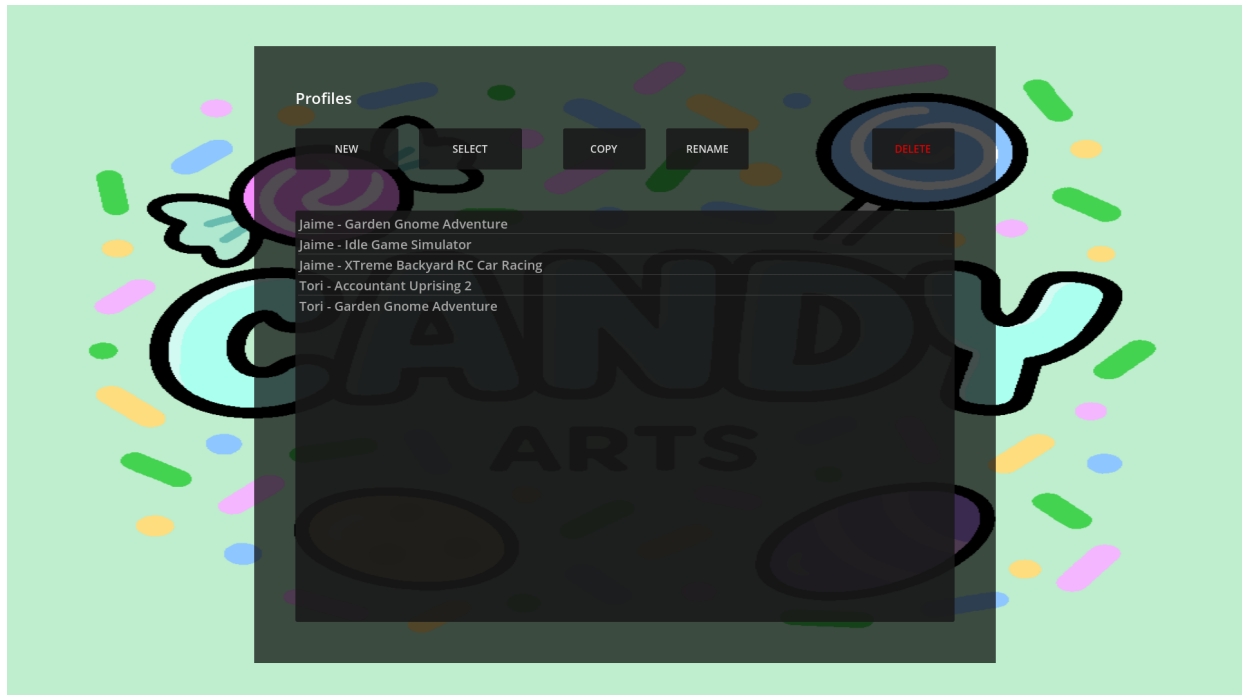

Profiles

1.0.0

Profiles are used for separating settings between users and projects.

Profile Menu

When Candy Dialogue Creator launches, the Profile Menu immediately opens:

There, you may create a new profile, copy, rename or delete an existing profile, or simply select the one you want to use.

The Profile Menu can otherwise be accessed at anytime through the Main Menu.

Profile Settings

Profiles save all the settings found in the Settings Menu.

In addition, they save Custom Presets (i.e. custom lines or group of lines with pre-written data, for quick insertion into your dialogues), and Custom Inserts in the Writer. They also save the line data you've chosen to show or hide in the Main UI.

Profiles do not save your dialogues. Dialogues are saved separately, using the Save/Load feature, or alternately the Export/Import feature.

Folders & Files

Profiles are saved in the Candy Dialogue Creator folder, in the "Profiles" folder. There, each profile is provided its own subfolder.

Profile settings are saved in the file titled 'Config.json'.
