

CANDY DIALOGUE ENGINE

Introduction

1.1.0

The latest version of the documentation can be found on [GitHub](#). Documentation files provided with downloads of Candy Dialogue Engine may not be the most up-to-date.

The documentation is split into multiple PDF files, to make finding the information you're looking for easier.

It is **strongly** recommended that you start by reading the guides in this folder, in numerical order, as they provide essential information (i.e. from "1. Basic Setup" to "7. Translations").

After that, you may find more information in the following folders:

- General** → Information about general features.
- Spoken Lines** → Information about the various features relating to spoken lines specifically.
- Commands** → Information about dialogue command lines.
- UI Customization** → Information about customizing dialogue UI elements.
- Advanced** → Information about modifying Candy DE code, or adding features to it.
- Tutorials** → Tutorials on how to set up various things users may want to achieve. Don't expect detailed instructions: most tutorials are meant to just give you pointers and ideas.

If you come across documents named "READ FIRST", read them first: they contain important information that relates to all the guides in the same folder.

You're not expected to learn all the guides: take a quick glance to see what features exist, but otherwise only read the details for features you actually want to use.
